

505 Main Street Φ Farmington CT 06032 Φ 1-877-677-9797

ING Project

OWNER

Location Windsor, CT

Project Value \$12MM

Completion date October 2007

Major Challenge Extremely fast-track with staggered occupation of building

General Contractor John Moriarty & Associates

DESCRIPTION OF WORK

McPhee provided all electrical work for this 475,000 sq ft, four-story office building set on a 76-acre site. The "green" building – serving as ING's primary retirement services business, the company's largest business unit in the country -- is the company's biggest IT center in the United States. Lighting and energy design and construction enables ING to meet its goal of being carbon-neutral by year's end.

The building is located near two power grids providing greater stability from a business continuity perspective, via redundant uninterruptible power supply (UPS) with full backup generator. This project represents the largest single office structure to be built in Greater Hartford in two decades.
